

# The #1 Destroyer of Marriages

It isn't cohabitation.  
It isn't adultery.  
Though both  
contribute  
significantly.  
It is hormonal  
contraceptives.  
Most often,  
the Pill.

The Pill separates the divinely ordained and self-evident “dual purpose” of the conjugal act: new life and marital unity.

Though the conjugal act must always remain “open” to the possibility of conception, the number and spacing of children is between a married couple and God.

Many thousands of couples face this challenge and have turned to Naprotechnology for help. “Napro” has proven 96% effective for conceiving children ... and 98% effective for spacing children.

Compare that with the “failure rate” of the Pill ... and the divorce rate of married couples who use some form of hormonal contraceptives.

**Why risk your happiness? Why risk the stability of your family?**

# A Bitter Pill

## CONSIDER:

- 98% of all women in the U.S. who have had sexual intercourse have used at least one contraceptive method.
- Women who use a hormonal contraceptive for a minimum of four years prior to their first full term pregnancy have a 52% higher risk of developing breast cancer.
- Women who use a hormonal contraceptive for more than five years are four times more likely to develop cervical cancer.
- The increased risk of cancer and the “abortifacient action” in hormonal contraceptives is documented by pharmaceutical manufacturers themselves in their package inserts.
- The World Health Organization (WHO) has categorized hormonal contraceptives as a Category One Carcinogen.
- The Environmental Protection Agency (EPA) has identified hormonal contraceptives as the #1 pollutant of U.S. rivers and streams and the leading destroyer of America’s fishing stocks.
- Hormonal contraceptives are responsible for, on the average, five times as many chemical abortions as surgical abortions, which now total at least 60 million just in the U.S.
- Prior to the advent of the Pill, there were known to be five sexually transmitted diseases (STD’s). Today, there are more than 30, with nearly 20 million STD cases are reported annually in the U.S.
- By age forty-five, at least one partner in every two marriages has been sterilized.
